

**IW4051B**

## Analog Multiplexer Demultiplexer High-Performance Silicon-Gate CMOS

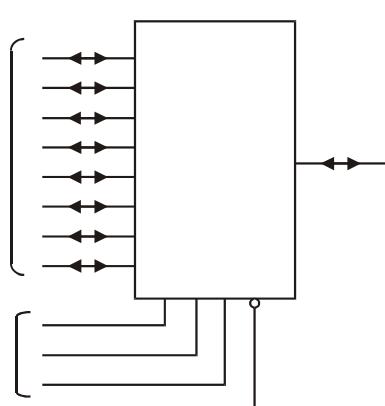

The IW4051B analog multiplexer/demultiplexer is digitally controlled analog switches having low ON impedance and very low OFF leakage current. Control of analog signals up to 20V peak-to-peak can be achieved by digital signal amplitudes of 4.5 to 20V (if  $V_{CC} - GND = 3V$ , a  $V_{CC} - V_{EE}$  of up to 13 V can be controlled; for  $V_{CC}-V_{EE}$  level differences above 13V a  $V_{CC} - GND$  of at least 4.5V is required).

These multiplexer circuits dissipate extremely low quiescent power over the full  $V_{CC}$ -GND and  $V_{CC}$ - $V_{EE}$  supply-voltage ranges, independent of the logic state of the control signals. When a logic "1" is present at the ENABLE input terminal all channels are off.

The IW4051B is a single 8-channel multiplexer having three binary control inputs, A, B and C, and an ENABLE input. The three binary signals select 1 of 8 channels to be turned on, and connect one of the 8 inputs to the output.

- Operating Voltage Range: 3.0 to 18 V
- Maximum input current of 1  $\mu$ A at 18 V over full package-temperature range; 100 nA at 18 V and 25°C
- Noise margin (over full package temperature range):
  - 1.0 V min @ 5.0 V supply
  - 2.0 V min @ 10.0 V supply
  - 2.5 V min @ 15.0 V supply

### LOGIC DIAGRAM Single-Pole, 8-Position Plus Common Off

PIN 16 =  $V_{CC}$

PIN 7 =  $V_{EE}$

PIN 8 = GND

## PIN ASSIGNMENT

X4	1	●	16	$V_{CC}$
X6	2		15	X2
X	3		14	X1
X7	4		13	X0
X5	5		12	X3
ENABLE	6		11	A
$V_{EE}$	7		10	B
GND	8		9	C

## FUNCTION TABLE

Enable	Control Inputs			ON Channels

X = don't care

**INTEGRAL**

**MAXIMUM RATINGS\***

Symbol	Parameter	Value	Unit
V <sub>CC</sub>	DC Supply Voltage (Referenced to GND)	-0.5 to +20	V
V <sub>IN</sub>	DC Input Voltage (Referenced to GND)	-0.5 to V <sub>CC</sub> + 0.5	V
I <sub>IN</sub>	DC Input Current, per Pin	±10	mA
P <sub>D</sub>	Power Dissipation in Still Air	500* <sup>1</sup>	mW
P <sub>tot</sub>	Power Dissipation per Output Transistor	100	mW
T <sub>stg</sub>	Storage Temperature	-65 to +150	°C
T <sub>L</sub>	Lead Temperature, 1 mm from Case for 10 Seconds (Plastic DIP or SO Package)	260	°C

\*Maximum Ratings are those values beyond which damage to the device may occur.

Functional operation should be restricted to the Recommended Operating Conditions.

\*<sup>1</sup> - for Plastic DIP from -55° to +100°C, for SO Package from -55° to +65°C.

+Derating - Plastic DIP: - 12 mW/°C from 100° to 125°C

SO Package: - 7 mW/°C from 65° to 125°C

**RECOMMENDED OPERATING CONDITIONS**

Symbol	Parameter	Min	Max	Unit
V <sub>CC</sub>	DC Supply Voltage (Referenced to GND)	3.0	18	V
V <sub>IN</sub>	DC Input Voltage (Referenced to GND)	0	V <sub>CC</sub>	V
T <sub>A</sub>	Operating Temperature, All Package Types	-55	+125	°C

This device contains protection circuitry to guard against damage due to high static voltages or electric fields. However, precautions must be taken to avoid applications of any voltage higher than maximum rated voltages to this high-impedance circuit. For proper operation, V<sub>IN</sub> and V<sub>OUT</sub> should be constrained to the range GND≤(V<sub>IN</sub> or V<sub>OUT</sub>)≤V<sub>CC</sub>.

Unused digital pins must be tied to an appropriate logic voltage level (e.g., either GND or V<sub>CC</sub>). Unused Analog I/O pins may be left open or terminated.
